Ph.D. in ECONOMICS – Universities of Milan and Pavia

Economic Growth

Academic year 2025-26 –First Term

Ulrich Schetter, University of Pavia

Office: Room 4, Via San Felice 5

Tel +39 351 313 00 36

E-mail: ulrich.schetter@unipv.it

Office hours: by appointment

Course description and learning objectives:

This course provides an introduction to modern economic growth theory. It recapitulates exogenous growth models and then gives an overview over the mechanisms leading to endogenous growth. We will shed light on why long-term growth is possible or desirable and why the growth performance of countries is so different. Various methods to analyze intertemporal problems are studied: Hamiltonian, Lagrange, phase diagrams. Lastly, we discuss key policy implications.

Learning outcomes

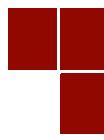

Students will be introduced to workhorse general equilibrium growth models. They will learn how to analyze these models and get an overview of endogenous growth theory.

Course prerequisites

The course requires basic knowledge in macro- and microeconomics, as well as a working knowledge in mathematics for economists. Regular lecture attendance is strongly recommended.

Course organization: 20 hours of lectures

Course Assessment: Written exam 90 mins closed book

Syllabus

| | |
|--------|--|
| 6 Oct | Introduction |
| 13 Oct | Solow Model |
| 27 Oct | Foundations and Intertemporal Optimization |
| 3 Nov | Ramsey I |
| 7 Nov | Ramsey II |
| 10 Nov | Exercise Session I |
| 17 Nov | AK Model |
| 24 Nov | Expanding Variety Models |
| 1 Dec | Schumpeterian Growth Models & further topics |
| 5 Dec | Exercise Session II & Linearization |
| 15 Dec | Exam |
